About SearchForecast

SearchForecast is a global search engine intelligence and enterprise solution business that provides insights of 150,000 top global ranking domain names across 475 industry categories.

SearchForecast provides metrics on how search engines rank websites as well as providing website visitation metrics, industry comparisons and relative market shares.

SearchForecast's patent pending Search Engine Visibility Scorecard provides management with the exact elements a website contains or omits and explains their impact on search engine rankings.

SearchForecast mission is to provide solutions to increase website rankings in search engine results pages by increasing the effectiveness of website visibility to search engines.

About SearchForecast Industry Reports

The SearchForecast Industry Report for Professional Services > IT provides an analysis of websites contained within the Professional Services > IT industries with Google, Yahoo! and Google (DMOZ).

The SearchForecast Industry Report for Professional Services > IT features the following analysis:

- Google Search Results Analysis
- Visibility Scorecard
- Google Cache Analysis
- Website Rank
- Best Performing
- Worst Performing
- Directory Listings
- Sub-Directory Analysis
- Google Vs Yahoo! Sub-Directory Analysis
- Backward Links
- Outward Links
- Competitor Links
- Domain Ownership
- Micro-Publisher Network (Google, Yahoo!, MIVA, Baidu, MSNSearch)
- Spider Crawl Speed

SearchForecast Methodology

SearchForecast calculates traffic rankings by analyzing which websites millions of Internet users throughout the world visit. SearchForecast continuously accesses and calculates our data analysis and reporting from various crawlers, that when combined, collect information from billions of website pages from over 10 million websites. SearchForecast's proprietary methodologies compute these statistics to produce traffic rankings and intelligence that organizations can use to improve search engine rankings.

SearchForecast has hundreds of industry and sub-directories into which our customers can compare a group of websites against each other to determine website metrics such as Page Views and Traffic Rankings. SearchForecast reports on gross numbers, percentages, relative rankings and market shares. SearchForecast also classifies websites by Country providing our members with geographical information.

SearchForecast consolidates information containing Backward and Competitor Links, search engine directories that websites are listed in, how each website is structured and the high audience keyword analysis. This is important information for search engine optimization and vital intelligence in order to improve rankings in search engine results pages.

Top 20 Websites by Google Search Results Analysis > Professional Services > IT > September, 2006

How to Read the Google Search Results Analysis?

The Google Search Results Analysis refers to the actual ranking a website has in the left hand side of the search engine results page based on a selected number of high audience keywords that are frequently typed into Google. The 'Organic Search Position' refers to the position that the website appears amongst their competitors in the left hand side of the search engine results page.

How to read the Search Engine Visibility Scorecard?

The Search Engine Visibility Scorecard analyzes website visibility to search engines by taking the average score, expressed as a percentage. It evaluates up to 55 known variables required for best practice in search engine optimization.

Important Note

Why do non related websites appear in the results?

SearchForecast retrieves website addresses from the directories within the major search engines including Google and Yahoo!.

Although a website may not seem related to a directory listing, if it appears in the table it is listed within that search engine directory. Many websites undertake Search Engine Optimization by increasing the number of directories their website address is listed in.

Top 50 Websites by Google Cache Analysis > Professional Services > IT > September, 2006

How to Read the Google Cache Analysis?

The Google Cached Pages Analysis refers to the pre-indexed pages of a website in the Google Cache, including subdomains. Search Engines typically do not index all pages of a website and it is therefore important to monitor how many web pages are cached. As search engines like Google and Yahoo! frequently re-index the pages in their databases, they are likely to detect your link faster on a page already existing in their database as compared to a 'yet-to-be indexed' page.

The following legend shows the increase and decrease in the number of cached pages:

-  Increase in Ranking
-  Decrease in Ranking
-  No change in Ranking

How to read the Sub Directory Trend Analysis?

The Sub-Directory Trend Analysis refers to the number of Sub-Directories within each top level industry category of Google (DMOZ), Google and Yahoo, as well as the total number of website listings, market share and the density of sub-directories.

The Directories Listings in the table details the name of the Directory, the number of Sub Directories within that directory, the total number of websites that are listed in that Directory and the market share of those directories. The higher the number of Directories a website is listed in will, in theory, result that website being better indexed by search engines.

SearchForecast calculates the average number of listings in each directory, which we describe as the Density. The higher the density, the more listings in that directory. Search Engine Optimization should review the density per Sub-Directory to aid in the development of search engine friendly content.

How to Read the Sub Directory Table?

The Sub Directories listed in the table show which categories or classifications within various search engines the website is featured in. The higher the number of sub directories a website is listed in will, in theory, result that website being better indexed by search engines.

[View All Competitors in Sub Directories:](#)

Login to SearchForecast.com to view the list of Sub Directories websites in an industry are indexed in can be used to analyse whether a website is below or above industry competitors.

View All Directory Listings & Market Shares:

Login to SearchForecast.com to view the complete list of how many Sub Directories are analyzed in each Industry Categories by the number of listings and the market share. This analysis assists in understanding the composition of each Industry Category, critical in developing search engine optimization strategies.

How to Read the Backward Performing Websites Analysis?

Backward Links refers to the number of hyper text links that other websites have to another website. One of the important elements of search engine optimization is the number of backward links a website has as well as the quality of those links.

The average Backward Links can be used to analyze whether a website is below or above the industry average of Backward Links.

The following legend shows the increase and decrease in the number of backward links:

- ▲ Increase in backward links
- ▼ Decrease in backward links
- No change in backward links

How to Read the Outward Performing Websites Analysis?

Outward Links refers to the number of hyper text links that a websites has to another external website. It is important to evaluate the total number of outgoing links on a website page because getting a link from a webpage that has 100 outgoing links, your page would only get 1/100th of that value.

The average Outward Links can be used to analyze whether a website is below or above the industry average of Outward Links.

The following legend shows the increase and decrease in the number of outward links:

-  Increase in outward links
-  Decrease in outward links
-  No change in outward links

How to Read the Google Vs Yahoo! Sub Directory Table?

The Sub Directories listed in the table show which categories or classifications within various search engines the website is featured in. The higher the number of sub directories a website is listed in will, in theory, result that website being better indexed by search engines.
